ABOUT ME

I am a motivated MCA (Generative AI) student with a strong foundation in web development and computer applications. I have hands-on exposure to AI concepts, computer vision basics, and modern web technologies through academic and certification programs. I am passionate about learning, problem-solving, and applying technology to real-world use cases. Seeking an entry-level role where I can grow as a developer and contribute effectively to organizational goals.

EDUCATION

SRM Institute of Science and Technology, Tiruchirappalli

2025 - 2027

M.C.A- Generative AI

QUEENS COLLEGE OF ARTS AND SCIENCE FOR WOMEN, Pudukottai District

2022 - 2025

Bachelor of Computer Application

PROJECTS

AI-Powered Detection of Broken Parts in Diverse Images Using YOLOv5

- Developed an AI-powered web application titled "Fix It AI" for detecting damaged vehicle parts from images using deep learning.
- Built a robust backend API using FastAPI and Python, enabling image upload and real-time analysis through RESTful endpoints.
- Integrated YOLOv8 object detection model to identify vehicle types and damaged components with confidence scores.
- Implemented efficient image handling and inference logic to ensure fast and accurate detection results.
- Designed the system to be frontend-ready, allowing seamless integration with React or other web interfaces.

Technologies Used | Python, JavaScript, FastAPI, YOLOv8

Next-Gen Bike Sales Platform with AI Insights

- Developed a modern eCommerce web application for bike sales, supporting both new and used bikes with real-time availability and pricing.
- Designed a mobile-first, intuitive UI with filters for brand, price, engine CC, mileage, and fuel type, enabling fast bike discovery.
- Integrated an AI-powered recommendation engine to suggest bikes based on user preferences and past interactions.
- Implemented secure booking and payment system with EMI calculation, test ride scheduling, and multi-payment support.
- Built backend APIs using FastAPI to handle dynamic inventory, booking requests, and user interactions efficiently.
- Designed the platform to be frontend-ready with React, supporting smooth animations, 360° bike views, and responsive layouts.

Technologies Used | Python, FastAPI, React, JavaScript, Tailwind CSS, PostgreSQL, Razorpay API

SKILLS

Programming Languages: Python, JavaScript, HTML, CSS

Frameworks & Technologies: Node.js, React

Tools: VS Code

ACHIEVEMENTS

"AI-Powered Detection of Broken Parts in Diverse Images Using YOLOv5"
at GCCMIEA-2025 International Conference, Thailand.
